

Movie Producer Practice Exercise

This is a great exercise to end the book with. Your job is to take all of the images and movies you have created through these exercises and produce a compiled movie. I recommend making a **Black JPEG image** to use for your **first** and **last** image (start and end in black). Images should be displayed for approx. 3-5 seconds with 1 second transitions. When finished, o back to the Default screen and hit "Animate".

RoboDude Says: *It is best to work with movie files that have all been rendered at the same size and frames-per-second. Problems may occur when Blender tries to convert files that are different from the output you have selected.*

**** Call the instructor when finished****
