

## Rendering-Saving a Picture of the Landscape

Open your **Landscape** file and set up a good view for rendering to a JPEG file. Set your render options for the following:

1. Select file output type as JPEG, set compression quality to 100%
2. Turn on shadows
3. Turn on Anti-Aliasing and set to 8
4. Click the NTSC button to render an image at 720 x 480.
5. Name your file: *Landscape Image.jpg*

Double check all other settings as per the chapter descriptions, render image (F12) and save the image (F3). *Don't forget to add .jpg to the end of the file name!* We will soon be using the animation setting so begin to become familiar with those adjustments. We will be using them within the next few exercises.

### Additional Exercise:

Render your landscape at the "**1280 x 1024**" size setting. After you save it, open the picture in a program that allows you to set it as your desktop background (i.e. Windows Picture and Fax Viewer).
